

Steady-State Power System Security Analysis with PowerWorld Simulator

Presented by: PowerWorld Corporation
2001 South First Street
Champaign, IL 61820
support@powerworld.com
www.powerworld.com

Day 1

8:30 - 9:30 S1: Power System Modeling
9:30 - 10:15 S2: Advanced Power Flow Solutions
10:15 - 10:30 Break
10:30 - 12:00 S3: Techniques for Conditioning Hard-to-Solve Cases
12:00 - 1:00 Lunch
1:00 - 2:30 S4: Advanced Contingency Modeling
2:30 - 2:45 Break
2:45 - 4:00 S5: Available Transfer Capability (ATC Add-on)
4:00 - 4:30 S11: Distributed Computing (Distributed Add-ons)

Day 2

8:30 - 9:30 S6: Voltage Stability Using PV Curves (PV Add-on)
9:30 - 10:15 S7: Voltage Stability Using QV Curves (QV Add-on)
10:15 - 10:30 Break
10:30 - 12:00 S8: Security Analysis for a Generator Interconnection Study
12:00 - 1:00 Lunch
1:00 - 2:00 S8: Security Analysis for a Generator Interconnection Study
(continued)
2:00 - 2:15 Break
2:15 - 3:00 S9: ATC/PVQV Automation Examples
3:00 - 3:45 S10: Integrated Topology Processing (ITP Add-on)
3:45 - 4:30 S12: Geomagnetically Induced Current (GIC Add-on)
